

August 2015

Dear Parents, Guardians, and Students,

One type of meningitis is caused by a bacterium called *Neisseria meningitides*. Infections caused by the bacterium are serious, and may lead to death. Symptoms of an infection with *Neisseria meningitides* may include a high fever, headache, stiff neck, nausea, confusion, and a rash. This disease can become severe very quickly and often leads to deafness, mental retardation, loss of arms or legs, and even death. The bacteria are spread from close person to person contact through the exchange of nose and throat secretions, by activities such as kissing or sharing eating or drinking utensils. The bacteria are not spread by casual contact or by simply breathing the air where a person with meningitis has been.

There are two vaccines that can help prevent cases of this disease in teens and young adults. The United States Centers for Disease Control and Prevention (CDC) recommends vaccination of children with the meningococcal conjugate vaccine (Menactra and Menveo) at 11 or 12 years of age, with a booster dose of the vaccine at 16 years of age. The booster dose at age 16 provides ongoing protection from the disease after high school.

The state of Indiana requires all students in grades 6-12 to have the appropriate number of meningococcal conjugate vaccine doses. One dose of meningococcal conjugate vaccine is required for all students in 6<sup>th</sup>-11<sup>th</sup> grade. A second booster dose is required for students entering 12<sup>th</sup> grade. These vaccines are a legal requirement for school entry (Indiana Administrative Code 410 IAC 1-1-1) for the 2015-2016 school year.

All students in grades 6-12 must have acceptable documentation of required immunizations on record at the school they are currently attending. An acceptable record includes a signed record from the child's health care provider indicating the name of the vaccine given and the date it was given, a record of the immunization in the state immunization registry (CHIRP) prior to the start of the school year, or a record from another school showing the required immunizations have been given.

Many local health departments and private healthcare providers offer this vaccine. Please contact your health care provider for specific instructions regarding your child.

More information about meningococcal disease can be found at:
